The screenshot displays the 'Flow Control Scheme' (流控方案) configuration page in a Ruijie network device's web interface. The 'Flow Control Scheme' (流控方案) dropdown menu is open, showing three options: 'Guarantee Office Applications (Enterprise)' (保证办公应用 (企业)), 'Game Priority (Internet Cafe)' (游戏优先 (网吧)), and 'Guarantee Internet and Games (Hotel)' (保证上网和游戏 (酒店)). The 'Guarantee Office Applications (Enterprise)' option is selected. A red warning message states: 'Please ensure that the bandwidth of the following applications is guaranteed.' (请保证以下应用的带宽。). Below the menu, there are several configuration sections. One section is titled 'Use Ruijie's intelligent bandwidth control' (使用锐捷的智能带宽控制) and lists various applications like VoIP, Web, Mobile, etc. Another section is titled 'Normal/Other' (普通/其他类) and lists applications like Email, Internet File Transfer, etc. A note at the bottom states: 'Note: Control bandwidth, bandwidth is limited first (bandwidth is not limited), bandwidth is limited when bandwidth is full.' (注意：控制带宽，带宽是有限制先（带宽不限制），带宽是有限制当带宽满了时。）。 The interface also shows a traffic flow visualization at the bottom.
